Navneesh Sagar (20164155)

Nayan Jain (20164046)

Problem Statement

- A countless number of children go missing every year.
- The category of missing children include a number of problems including abduction or kidnapping of children, run-away children, trafficked children, and lost children.
- Cases are often not reported to the police.
- In 2005, National Human Rights Commission (NHRC) informed that on an average 44000 children are reported missing every year. Of these, as many as 11000 remain untraced.

Purpose

The aim of proposed system is to develop a system of improved facilities. The proposed system can overcome all the limitations of the existing systems. The system provides proper security and reduces the manual work (filing FIR and all paper work).

Scope

The existing system has several disadvantages and many more difficulties for it to work well. The proposed system tries to eliminate or reduce these difficulties up to some extent. The proposed system will help the user to reduce the workload and mental conflict. The proposed system helps the user to work user friendly and he can easily do his task without time lagging.

Software Requirements

Languages : Java 2(JDBC, JSP, Servlet)

Front End : HTML, JavaScript

Web Servers : Apache/Tomcat

Backend : My SQL

Browser Program : Google chrome

OS – Windows 7/8/10 32/64 bit

Hardware Requirements

RAM – 4GB or above for Windows 10/ 2GB or above for
Windows 7/8

Home Page

localhost:8080/LostAndFound/re x

localhost:8080/LostAndFound/register

Modules and Control flow

Any number of clients can connect to the server at the same time. Each user first makes their login to server to show their availability. The server can be any web server. The server then matches the user credentials with those stored in the database.

Visitor mode

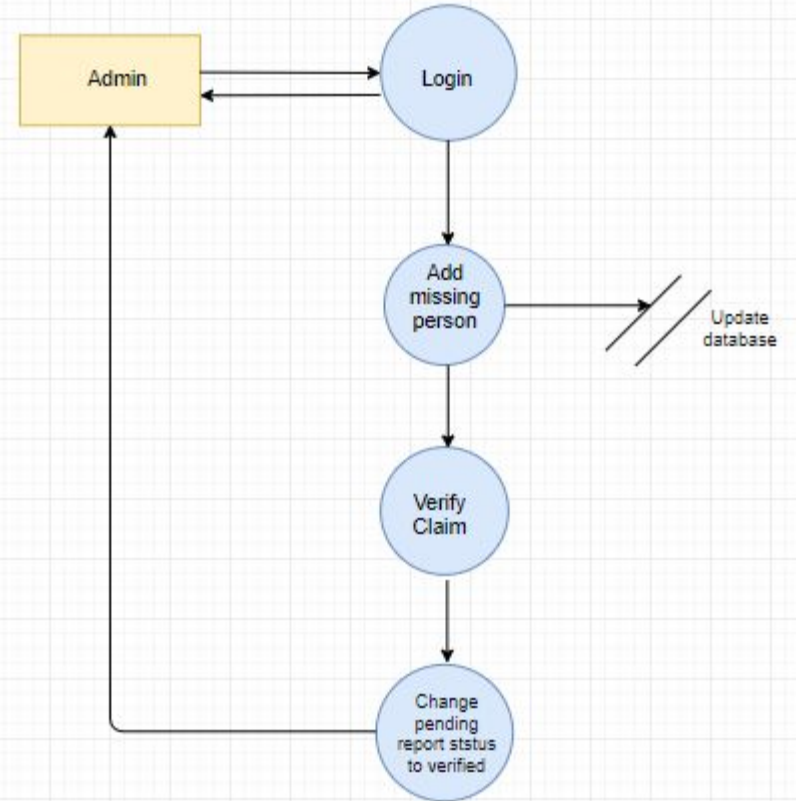

- **Search missing child-** The form for searching missing children is duly filled by the finders through this module.
- **Filter categories-** Search can be made more efficient by filtering reports according to categories such as height, weight, age of missing child, State in which child was reported missing.
- **Claim child-** The claimant of the missing child produces proof of being the child's guardian and waits until the claim is verified by the concerned authorities.

Level 1 DFD (Visitor mode)

Admin mode

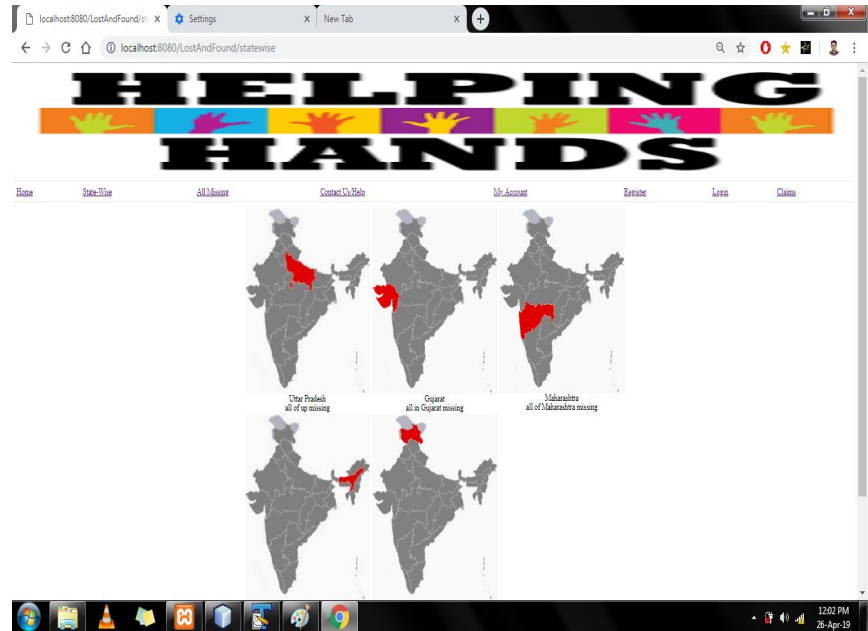

- **Add missing person-** After every submission of missing report, the database is updated with all the details of the child missing. When a sighting is reported, the database is updated with the details of the child spotted.
- **Claim verification-** The authorities match the credentials of the child and claimant.
- **Change report status-** This module is invoked soon after the report of the missing child is filed. The verification of the FIR uploaded takes place in the police mode of the system.

Level 1 DFD (Admin mode)

Implementation

Photos of missing persons were added to the database and various other details were also updated such as age, complexion, height and place they belong to.

Result

Missing persons are searched successfully and the status of the claim report is displayed on the information page of the user.

The screenshot shows a web browser at localhost:8080/lostAndFound/adm/missing. The page has navigation links: [statewise](#), [details of all missing](#), [Claim Details](#), [User Details](#), and [Logout](#). Below the links is a form with the following fields:

- Category:
- Person Name:
- Details:
- Gender:
- Station:
- Photo: No file chosen

Below the form is a table with the following data:

PID	CID	Name	Description	State	Qty	Photo
1	1	piyush gupta	missing since 1 jan	Male	Meerut 250002	
2	3	Sparsh	5'8" Fair Complexion	Male	Mumbai borivali 400092	
3	5	Priya	5'6"	Female	JammuTawi-180001	
4	1	abc x	2 yr old	Male	Bareilly 270008	

The screenshot shows a web browser at localhost:8080/lostAndFound/adm/claims. The page has navigation links: [statewise](#), [details of all missing](#), [Claim Details](#), [User Details](#), and [Logout](#). Below the links is a table with the following data:

Order Id	Date	Email	CurrentStatus
1	2019-04-26	naman@xy.com	Unverified
2	2019-04-26	naman@xy.com	Unverified
3	2019-04-26	naman@xy.com	Unverified
4	2019-04-26	naman@xy.com	Unverified
5	2019-04-26	navneesh@xy.com	Unverified

Black Box Testing

OBJECTIVE	MODE	STEPS	TEST DATA	RESULT
Successful login of registered users	Admin, visitor	Enter username and password in login panel	A valid username and password	The user is logged in successfully
Submitting missing children's report	Visitor	Click on submit button after filling the form	None	Report is recorded successfully and database is updated
Searching missing children	Visitor	Fill in the details, then click search	None	Relevant results are displayed
FIR/ Claim verification	Admin	Click verify on completion of the process	None	The verified report is removed from the pending reports

Future Scope

- **Face recognition using ML-** The scope of our project can be expanded in future by asking the users to upload images of the child that is missing. Face recognition will match these photos with those present in our database and show the result.
- **Advanced search-** Advanced search features such as search based on GPS location of the user can be implemented such that missing persons of the same area are displayed.
